

ORALERT-Oral Saliva Drug Test

In a continual effort to be proactive in keeping drugs and alcohol out of our school buildings, Chinook Public Schools has purchased ORALERT, which is an oral saliva drug test. Specimen samples for saliva testing are collected under direct supervision without donor privacy issues in a procedure that is safe and clean. Within minutes of administering the test, the presence of amphetamines, benzodiazepine, cocaine, marijuana, methamphetamine, and opiates will be detected.

The use of breath tests and saliva test kits have been in School Board Policy 3231 for many years, okayed for use In the event that there is reasonable suspicion an individual is under the influence of illegal substances. With any of the devices or tests used, it is the School Districts sole purpose to provide all students a safe and secure learning environment.
